SANJANA MEDARAMETLA

I SECTION

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall allow shelter staff to log animal vaccination and medical intake records, updating the animal's status to 'Ready for Adoption'.	High	Pass: Adding complete medical clearance flags pet as 'Ready for Adoption'. Fail: Animal under medical quarantine is marked adopted.	Ensures pets are medically cleared before public listing.
FR-002	Functional	The system shall allow adoption applicants to search and filter available pets by species, age, breed, and child-friendliness.	High	Pass: Querying filters updates pet list accurately. Fail: Filter returns unavailable or quarantined pets.	Helps adopters quickly locate compatible animals.
FR-003	Functional	The system shall allow registered applicants to submit an online adoption questionnaire and background screening form.	High	Pass: Application is submitted and tied to user ID and pet profile. Fail: Incomplete application submits successfully.	Required to assess applicant suitability before approval.
FR-004	Functional	The system shall allow shelter staff to review, approve, or reject pending adoption applications.	Medium	Pass: Status update automatically emails applicant with next steps. Fail: Decision recorded without applicant notification.	Core administrative workflow for finalizing adoptions.

FR-005	Functional	The system shall track foster home placement timelines, active assignments, and return check-ins.	Medium	Pass: Foster parent assignment dates update the shelter capacity dashboard. Fail: Overdue foster placement does not generate an alert.	Manages capacity and shelter resource planning.
NFR-001	Non-Functional	The pet search catalog must support multi-attribute filtering with a page response time under 200 ms.	High	Pass: Benchmarking confirms search latency < 200 ms under simulated peak load. Fail: Latency >= 200 ms.	Ensures smooth and responsive user experience.
NFR-002	Non-Functional	The system shall encrypt all sensitive adopter data (PII, home screening notes) in transit (TLS 1.3) and at rest (AES-256).	High	Pass: Vulnerability scans show no unencrypted PII in database storage or network transmission. Fail: Plaintext data detected.	Protects applicant privacy and ensures compliance with security standards.
